I thought it was a very productive conversation yesterday. Thank you.

We did collect two sets of samples today. And we do the analysis in house. I have been in Baltimore all day closed away from communications in a meeting with the Baltimore District Engineer, so I didn't get this note in time to get you an answer on when the analysis can be completed. I'll forward you that tomorrow.

I did stop by the GT sedimentation basins on my way back to Dalecarlia from Baltimore and we have made good progress (and I saw the samples that were collected today).

The concrete bottom section is essentially complete.

We will resume the work in the clay bottom segment on Monday.

If you would like to have someone come out and see that work, I would suggest about 9:00 am on Monday.

We'll confirm that with you first thing on Monday morning.

By the end of the day tomorrow we will have decided on our approach for the timing of the discharge of the smaller basin, and I'll pass that schedule to you.

We are also compiling the data to provide the estimate of the quantity of solids in that basin when we began the discharge on Sunday afternoon.

Tom,

WQD appreciates your time yesterday to address our concerns with the sediment basin cleaning.

WQD has a couple of questions and requests to elaborate on the TSS sampling requested. We assume that you will be conducting the TSS analysis in house. If not please provide the name of the lab you will be using. Additionally please provide the estimated turn around time for the analysis.

When providing the results of the analysis please include a figure or narrative describing where the samples were collected.

If you have any questions regarding the sampling or other requests please do not hesitate to contact me.
